ROHAN CHAUHAN

Python AI / LLM / Backend and Web Application Developer

chauhanrohan223@gmail.com | Greater Noida, India
linkedin.com/in/rohanchauhan07 | github.com/RohanCh07

WHO I AM

Software Engineer specialising in backend engineering and AI-driven applications, with experience building production-oriented APIs, data pipelines and intelligent systems. Skilled in Python, FastAPI, databases, Kafka, Docker and LLM-based solutions, with a focus on scalable, reliable systems that solve real business problems.

WORK EXPERIENCE

Software Engineer Jul 2026 – Present
Moglix · B2B supply chain

- Build REST APIs and backend systems, working with VLLMs, OCR techniques and LLM prediction models.
- Work with the AI & Analytics team to deliver solutions for several major clients and internal teams.
- **Tech:** Python, REST APIs, databases, data analysis, Kafka, Kaleyra, Git, Docker, AI models

Python Engineering Intern Mar 2026 – Jul 2026
Moglix

- Designed and implemented analytical solutions covering data processing, analysis and programming.
- Worked with teams to deliver insights and automate workflows for ongoing projects.
- Built **Cerebra**, a GenAI chatbot that creates purchase requests (PRs) and RFQs in Credlex.
- **Tech:** Python, REST APIs, MySQL, PostgreSQL, MongoDB, data analysis, Kafka, Kaleyra, Git

AI Research Intern Jun 2025 – Jan 2026
Coding Jr

- Worked as a Software Development Engineer (SDE) on the company's internal admin panel.
- Designed the backend logic and implemented core features with the team.
- **Tech:** Python, REST APIs, web design, Git

Full-Stack Intern Apr 2024 – Jun 2024
Wayspire

- Built and debugged full-stack modules with a team, improving performance and the user interface.

PROJECTS

Lumida — AI Data Anomaly Detection Engine lumida.netlify.app
Self-hosted engine that connects read-only to company databases, finds hidden data problems, explains them with an LLM and learns from human feedback.

- Infers undocumented relationships between tables and flags data problems, each with evidence and a plain-language LLM explanation.
- Human-in-the-loop: reviewers confirm or dismiss findings, and the engine learns from that feedback.
- On a test database it found **15/15** hidden relationships and **13/13** planted problems with **0** false alarms.
- **Tech:** Python, FastAPI, PostgreSQL, Docker, Google Gemini

Distiller — LLM Cost-Reduction Gateway (in progress)
OpenAI-compatible gateway that teams adopt by changing one line.

- Logs a company's repetitive LLM calls, fine-tunes small open models with LoRA to copy the large model, tests them in shadow mode, then routes confident requests to the cheaper model with fallback.
- Gateway skeleton and CLI working; training and routing in development.
- **Tech:** Python, FastAPI, LiteLLM, LoRA, Ollama

Bug Detection & Fix Suggestion Tool
VS Code extension for AI-assisted debugging.

- Captures both static lint errors and runtime exceptions, then uses LLM-based RAG over a vector database to explain or fix them.

- Two modes: *Tutor* explains why the code broke; *Debugger* proposes a fix.
- **Tech:** TypeScript, VS Code API, FastAPI, Python, RAG, vector DB

Real-Time Flight Delay Predictor

Delay forecasts for major Indian airports.

- Data pipeline that combines live flight and weather data from external APIs to forecast delays with an ML model.
- Streamlit dashboard showing live flight status alongside the predictions.
- **Tech:** Python, Scikit-learn, Pandas, Streamlit

E-commerce REST API

Backend for products, carts and orders.

- REST APIs with input validation, role-based access control on Django's auth system and clean JSON responses.
- Normalised MySQL schema with ORM logic for stock updates and order totals.
- **Tech:** Python, Django REST Framework, MySQL

RESEARCH & CERTIFICATIONS

BlockAuth — Blockchain-based Decentralised Identity Management System

Research paper presentation · ICSDS-2025 · Hooghly Engineering & Technology College · Dec 2025

- Designed and developed a blockchain-based decentralised identity system for secure authentication and access control across IoT networks.
- Presented the research at ICSDS-2025.

Machine Learning A–Z: AI, Python & R + ChatGPT Bonus	Udemy · 2023
AWS Deep Dive — Certificate of Completion	AWS · 2023
Android Application Development	Udemy · 2023
Intel Unnati Program — AI/ML Track	Intel · 2025
Introduction to Cybersecurity	Cisco Networking Academy · 2025
Data Analytics Job Simulation	Deloitte (Forage) · 2025

EDUCATION

B.Tech CSE (AI & ML)	Greater Noida Institute of Technology	CGPA 8.3	2022 – 2026
Intermediate (PCM)	St Mary's School, Kashipur	78%	2021
High School	St Mary's School, Kashipur	78%	2019

Top 15 department rank across multiple semesters · "Eloquent Speaker" award

SKILLS

Languages	Python, Java, Kotlin, XML	**Server frameworks**	FastAPI, Django, Flask
Databases	SQL, MongoDB, FirebaseDB	**AI / ML**	LangChain, LangGraph, PyTorch, Scikit-learn
Cloud & DevOps	AWS, Docker, Kafka, Git CI/CD	**Version control**	Git, GitHub
Android	Jetpack Compose, Room DB, MVVM	**Web**	Django templating, HTML, CSS, JS

HACKATHONS

Smart India Hackathon	Greater Noida Institute of Technology	2024
Hack KRMU 4.0	KRMU University, Gurugram	2024
Road Safety Hackathon	NHAI and HOAI, Delhi	2024
Build with India Hackathon	Google Office, Gurugram	2024
